

ANSWER Integrated Headsets

Required Tools:

- Crown Race Installer
- Grease

Instructions:

1. Using a headset race installer, hammer the supplied headset race onto the crown of the steer tube on your fork until race is completely flat onto the crown area.
2. Place the bearings from the headset into the head tube of frame.
3. With the race installed, slide the fork up through the bearings of the headset and through the head tube on the frame.
4. Slide the supplied centering spacer over the steer tube until properly seated onto top headset bearing.
5. Slide the supplied dust cover over steer tube onto the top headset bearing.
6. Reinstall stem, headset spacers, and top cap onto steer tube and tighten as per stem and fork instruction manual.
7. Please ensure tightness of all bolts and screws while performing your regular bike maintenance.
